

Rocket Folio/NXT NXT 4

provide powerful online and offline search capability for unstructured data

Rocket NXT 4 is an electronic publishing suite that gives you a single, integrated process for storing, assembling, securing and delivering reference libraries—on your corporate intranet, to your employees' hard drives, over the Web, or on CD or DVD. With powerful search and navigation tools, NXT 4 makes the information your business depends on more accessible and useful.

NXT 4 includes all the pieces you need to make new information available quickly, keep your existing content current, and tightly control access to sensitive information. With Rocket NXT 4, you can lower the costs and risks of managing and maintaining your corporate information and make up-to-date content more available and useful to everyone in your organization.

key benefits

- Take unstructured data and easily deploy for online search
- Intuitive and familiar online UI
- No content conversion required
- Secure and control access to your content

key features

- Take unstructured data such as XML, HTML, PDF, Powerpoint, ODBC data sources and Word Docs and quickly index them in their native format without wasting time converting from one format to another. Or take a single modular file containing the source data and place it online through NXT Online Server. Then easily deploy it for offline consumption using the same online site.
- Easily integrate NXT into your LDAP system or customize it to work with database systems for access control. NXT content can also be controlled through rights management providing powerful and secure content licensing to restrict how users can access content, to set license expiration periods and to control what content a user can and can't see.
- NXT's low system requirements make it easy to deploy on existing hardware.
- NXT can be scaled upward to meet the demands of growing sites hosting large volumes of content and providing access to a large number of users.
- Define custom fields for powerful, broad or granular search.
- Create custom indexing rules.
- Create a custom thesaurus where you can add unique, specific terms to enhance search results for end-users.
- Easily build updates to already published content. Simply build small, easy-to-distribute update files that can be automatically integrated to the existing content library, and avoid having to rebuild an entire library of content.
- NXT's default UI is coded in XML, Javascript and HTML—no need for website designers to learn new languages to customize the UI to fit your business needs.
- NXT servers can be linked together via Content Network Link—this allows for multiple NXT servers to share content with end-users dynamically and seamlessly. Users visiting a single NXT site will see all of this shared content as if one location was hosting it all.
- NXT allows you to easily create multiple NXT sites and sub-views with a single installation of NXT Online Server. Little effort is required to provide a variety of unique websites with their own content and UIs.

Take unstructured data and easily deploy for online search

Start using the NXT website right away. The NXT user interface is intuitive and easy-to-use—no training required.

Build documents in their native format—no content conversion required

Secure and control access to your content

why nxt?

no training required

- Dynamic, intuitive, easy-to-use search—start using NXT's out of the box UI right away

low tco

- Easy deployment
- Low system requirements
- Little manpower needed to maintain systems
- Easily convert unstructured data to content and deliver it online

leverage existing hardware infrastructure

- NXT runs on the Windows platforms that IT teams and end-users are already familiar with

no file conversion necessary

- Use existing files and leverage existing content creation methods—NXT takes your documents and indexes them into a standalone repository without needing to convert them to different formats

the takeaway

The Rocket NXT 4 product line provides several powerful ways to build and deploy your electronic reference information. Whether offering content to consumers online, within an intranet or offline, you can be assured that NXT 4 has the capability to meet your needs and to fit into your existing infrastructure and processes.
