

Rocket Folio/NXT Folio Views

Professional functionality

Instant, accurate answers

Flexible work and search
environment

find instant answers within volumes of free-format information, regardless of size.

Rocket Folio Views is a high-performance information retrieval software tool designed for professionals who rely on immediate access to information to make decisions. It was designed for robust, offline text searching within collections of free-format mission-critical information, regardless of size. As part of the Rocket Folio product suite, Folio Views accommodates a wide array of information access needs. By deploying Folio Views, organizations enable users to immediately enjoy the benefits of decision support through fast and easy access to the information they need.

benefits of the folio product suite

The Rocket Folio product suite, which is has now been fully tested and is fully supported on both Windows Vista and Windows 7-, 32- and 64-bit platforms, has long been recognized as the premier rich-client application suite for assembling, enhancing, securing and publishing high-value reference information. The Folio Views client includes an extremely fast search engine, intuitive navigation and many research features that can be personalized to help users pinpoint the information they need.

The Folio product suite helps publishers, corporations and developers leverage the value of knowledge exchange. Rich search features and robust technology explain why the world's top 10 publishers of professional information, and the majority of Fortune 500 companies, depend on Rocket Folio Views software to access, adapt and publish professional information on CD-ROM, corporate intranets and the Internet.

professional functionality

Professional information users recognize powerful features that distinguish Folio Views from other information management solutions.

making information manageable

Folio Views gives users complete control over information by keeping them in touch with the overall structure of the data they access and the query "hits" their searches produce. These features make massive volumes of information feel manageable, and help professional information users find answers quickly, even within hundreds of megabytes of free-format information containing graphics, sound and video objects.

providing functional content

When it comes to using content, Folio Views lets users go beyond browsing to personalize information and make lasting edits. Encryption technology from RSA Security (a division of EMC Software) protects secured information from unauthorized use.

making the internet productive

Because the Web offers a wealth of information, Folio Views includes site retrieval functionality, allowing you to bring Web content down to your local machine in an indexed and compressed format and take advantage of the powerful searching and personalization features found in Folio Views in an offline environment.

instant, accurate answers

Folio Views makes even the largest collections of information feel manageable by delivering the speed and flexibility to satisfy the search needs of both new and experienced users.

find the answer fast

Professional information users need reliable, powerful search tools to be productive. Folio Views delivers the power to find your search term as quickly as you can type the word - in most cases finding the search results before you finish typing your query.

make decisions with confidence

Good decisions require correct information. Folio Views ranks your search results from most important to least important, letting you make decisions quickly and with more confidence.

search without syntax

Gone are the days when powerful queries demanded complicated syntax. Folio View users type terms without syntax to generate valid queries, which simplifies searching operations for new users while providing state-of-the-art natural language search for users who want advanced searching technology.

flexible work and search environment

Folio Views provides an intuitive and powerful environment that's easy to understand, along with the flexibility to modify the environment for specific users or information types.

tailor the interface

Folio Views can be installed in English, Spanish, French, German, Dutch or Portuguese. End-users can easily customize and extend the Folio Views interface, and can add, change or remove menu items, toolbar buttons or viewing panes.

add value to your information

Folio Views lets users add personalized comments in margin notes, highlight information electronically to emphasize portions of text and create hypertext links to internal destinations or online destinations. Most importantly, users can instantly search annotations, and information can be modified and edited as easily as on a word processor.

make information your advantage

Whether you need to manage a mission-critical knowledge base, a corporate manual, a help desk or any other power-searching application, Folio Views offers the performance and flexibility to meet—and quite possibly exceed—your needs.

conduct controlled, focused searching

With Folio Views you can search an entire collection or focus your search on smaller units of information. You can also search within flexible fields or personal annotations, such as highlighted text portions and marginal notes. With this control, users find the right answers quickly instead of wandering through mountains of search results.

use information collections easily, regardless of size

Most professionals use large infobases, making it easy to feel overwhelmed when you seek answers from within huge amounts of information. With Folio Views, users are productive, regardless of the size of the content.

keep a personalized version

If a user wants to preserve the original infobase and still take advantage of the editing functionality in Folio Views, he or she can create a shadow file where users can make notes, apply highlights or edit the text without changing the original document.
